

New DIGIMIC classic series

DIGIMIC classic will close the gap between AUTOMIC and DIGIMIC wired/wireless in our product portfolio. CMic will be the thinnest digital unit in the market, being a stand-alone, cost efficient alternative to the DMic.

All future DIGIMIC classic components will be fully integrable into the DIGIMIC system, CMic and DGen will be compatible with each other, offering all basic functionality. Furthermore, it will be possible to run DIGIMIC wireless components (DMic and DDoc; DSpark) together with DGen and the new wired CMic, as well.

The most evident difference will be that CMic has no opportunity to convert the unit to a wireless one. Overall, as the DIGIMIC classic series will be positioned between AUTOMIC and DIGIMIC, there will be future differences in function and price in comparison with DMic wired.

DIGIMIC's CMic will be available in summer 2010.

INFRACOM's IRX available with 4 channels max.

INFRACOM's IRX will be now available with maximum four channels! Therefore we are able to realize a list price of EUR 130,00! Needless to say, the 4-channel IRX receiver will have a band switch for Band II and Band IV. It is fully compatible with the other INFRACOM components and accessories and can be easily incorporated into existing systems if needed.

Additionally, the new IRX 4-channel receiver is equipped with the shifting mode so that interfering influences by lighting systems can be avoided.

IRX4 will be announced at the Integrated Systems Europe 2010 in Amsterdam, as well.
